

What kind of applications can be released using UIComponents?

Any .NET WinForms application.

As long as your WinForm Assembly is 100% managed code, UIComponents can be your ideal tool for developing rich featured UI.

Currently, UIComponents v1.3 works with .NET Framework rel. 1.1 (SP1) or .NET Framework rel. 2.0.

Next version 2 will be designed and projected for .NET Framework 2.0 only.
