

Requirements

To ensure optimal performance, the Naxos UIComponents Collection has the following minimum and recommended system requirements:

- Operating System Microsoft® Windows® XP, Operating System Microsoft® Windows NT 2000 or later

- Microsoft .NET Framework Version 1.1 SP1 or Microsoft .NET Framework Version 2.0

- Processor Pentium II 233MHz. Reccomended Pentium III 300MHz

Compatibility Notes:

Naxos UIComponents Collection was not tested under version 1.0 of the .NET framework.

Naxos UIComponents Collection was not tested on Win98 systems.

IMPORTANT: Framework 1.1 Service Pack 1

If you use Visual Studio .NET v1.1, Framework Service Pack 1 is highly recommended. During development phase, our programmers found a bug in Framework 1.1 that has been solved with SP1. This bug was relative to serialization process: in some cases, the property settings was not saved, and therefore they was reverted to their original default value after an application rebuild.

IMPORTANT: Visual Studio 2003 Service Pack 1

If you are using Visual Studio 2003, installing Service Pack 1 is highly recommended. During the development phase, our programmers found a bug in Visual Studio 2003 that was fixed with SP1. This bug was related to the use of some Enum values. In certain cases, the Enum values of some properties are correctly serialized but the system may be unable to deserialize.
